Summary

I am currently a Senior Fellow at the Theory group of CERN. Previously I worked in the physics department of the University of Milano (Italy) as *Assegnista di Ricerca* (4 years) in the ERC project N3PDF (P.I. Prof. S. Forte). I did my Ph.D. at Durham University (UK) under the supervision of Prof. N. Glover, where I was part of the Initial Training Network *Higgstools* and worked on the second order QCD corrections to the Higgs boson production processes (H+J and VBF-H).
My main line of research is the application of machine learning (ML) techniques and cutting-edge technologies to theoretical particle physics. Some examples of my work include the development of a GPU-cabable event generator as well as pioneering work in applying quantum ML algorithms to address important challenges in particle physics, such as multi-dimensional parametric integration or parton density estimation. Additionally, as the Research & Development coordinator of the NNPDF collaboration, I lead efforts to model the internal structure of the proton utilizing artificial intelligence.
Beyond particle physics, I am very interested on software development, system administration and open source software. Most of my work require building and testing new ML models, analyzing large amounts of data as well as interpreting the final results. During my PhD I had the opportunity to do an internship on the Projects and Technology branch of Shell
I have participated in many conferences across the world and organized three editions of the YTF (Young Theorists Forum) held in Durham every Christmas.

Research Career

CERN **Geneva (Switzerland)**
CERN Senior Fellow in the CERN theory (TH) group *2022-Currently*
Competitive research position in the QCD subgroup. Since 2024, Research & Development coordinator of NNPDF. Organizer of the weekly QCD seminars.

University of Milan **Milan (Italy)**
Assegnista di ricerca *2018-2022*
Part of the N3PDF research project. PI Stefano Forte. Financed by the European Research Council through an Advanced Grant (n 740006) within the Horizon 2020 Research & Innovation Programme

Durham University **Durham (UK)**
PhD Thesis, Supervisor: Nigel Glover *2014-2018*
Next-to-Next-to-Leading Order QCD Corrections to Higgs Boson Production in Association with two Jets in Vector Boson Fusion. Financed by the Research Executive Agency (REA) of the European Union under the Grant Agreement PITN-GA-2012-316704 ("HiggsTools")

University of Zurich **Zurich (Switzerland)**
Academic Secondment, supervisor: Thomas Gehrmann *Oct-Dec 2016*

IFIC (Valencia) **Valencia (Spain)**
Research Stay, Supervisor: M. Vos *2014*
Project Title: Experimental Limitations to Charge Asymmetry measurement in top quark pair production at hadron colliders

University of Valencia & IFIC **Valencia (Spain)**
Master in Advanced Physics: Theoretical Physics, 94.6% *2013-2014*
Master Thesis supervisor: German Rodrigo
Study of charge asymmetry in $t\bar{t}$ production through axigluons

National Accelerators Center (CNA Sevilla) **Seville (Spain)**
Research Stay, Supervisor: J.M. Lopez-Gutierrez *June 2013*
Project Title: Development of computing tools for the analysis of Accelerator Mass Spectrometry results at the National Accelerators Center

University of Seville **Seville (Spain)**
Degree in Physics, 82.3% *2009-2013*
Bachelor's Thesis supervisor: Antonio Moro
Application of numerical resolution of a system with coupled differential equations to Quantum Scattering Problems with Internal Degrees of Freedom

PhD Thesis

Title: Next-to-Next-to-Leading Order QCD Corrections to Higgs Boson Production in Association with two Jets in Vector Boson Fusion

Supervisors: Nigel Glover (Durham U.) & Thomas Gehrmann (Zurich U.)

Abstract: In this thesis the second-order QCD corrections to electroweak production of a Higgs boson in association with two jets through vector boson fusion are considered. This calculation is fully differential in the kinematics of the Higgs boson and of the final state jets. Infrared divergences are regulated using the antenna subtraction method. We detail the implementation of the process in the parton-level Monte Carlo integrator NNLOJET and present inclusive calculations as well as differential distributions for a wide range of observables at different center-of-mass energies.

Grant: European Union, PITN-GA-2012-316704. Higgstools Initial Training Network

Teaching Experience

Advanced Artificial Intelligence for Precision High Energy Physics **6h**
Main tutor for the Machine Learning practical classes *July 2023*

Tutorial for the CMS collaboration **4h**
Tutorial of NNPDF fitting code *February 2023*

Teaching Assistant **University of Milan (Italy)**
Corso di Informatica, 3 years, 108h total *2019-2022*

Teaching Assistant **University of Milan (Italy)**
Fisica Quantistica II, 26h *2020-2021*

Teaching Assistant **University of Milan (Italy)**
Fisica Quantistica I, 10h *2019-2020*

NNPDF Code Meeting **Cambridge (UK)**
Course on the usage of the Keras and Tensorflow libraries, 5h *June 2019*

Teaching Assistant **Durham University (UK)**
First Year experimental methods course, weekly exercises, 36 h *2017-2018*

Complementary Education

CERN Visits Service training — **CERN**
Training on outreach and scientific communication for CERN guides — *2024*

Cisco Networking Academy — **Remote**
Cisco Cybersecurity Scholarship — *January-June 2021*

Cisco Networking Academy — **Remote**
Introduction to Cybersecurity — *April 2020*

Xilinx Developer Forum — **The Hague (The Netherlands)**
FPGA Developers Forum — *November 2019*

ExotHiggs — **Zuoz (Switzerland)**
Summer School on Higgs and BSM Physics — *August 2016*

YETI — **Durham (UK)**
Winter School: Prospects and Challenges for LHC Run II — *January 2016*

Higgstools Summer School — **Aosta Valley (Italy)**
Summer School on Higgs Physics for Early Stage Researchers — *July 2015*

Higgstools First Young Researches Meeting — **Durham (UK)**
Teamwork, Communication and Media training — *February 2015*

Non-academic work experience

Shell (Projects & Technology Division) — **Rijswijk (The Netherlands)**
Fortran and C Developer — *2016*

Dutch division of the Seismic Applications team (managed by Rob Eppenga).
As part of the Higgstools ITN I was given the opportunity of working at Shell for several months. In Shell I worked on the SIPMAP package, a suite of programs used for oil exploration and seismic tomography. While the formal detail of the algorithms used fall under a completely different branch of physics, the computing side was actually quite close to what it is done in high energy physics research.
My task during this internship consisted on the development and maintenance of the program (the oldest pieces written in Fortran, some of the more modern features C and C++). Runs of this code are very costly and thus optimisation is key, my focus during those months was on improving some of the algorithms and streamlining the workflow of the software. I also worked on porting parts of the code to new hardware (32 bits to 64 bits and GPU accelerators).

FamilyApp — **Seville (Spain)**
Frontend and Backend Developer, Python, HTML — *2014*

Sole developer of both the web interface and administration backend of the service.

Academic Open-Source Software

Creating new software is a cornerstone of my work. Moreover, I firmly believe that, especially in science, all tools should be open to the wider community whenever possible. To achieve this, I have spent some considerable effort not only to make the code accessible but also to ensure it is well-documented and user-friendly. The following is a selection of open-source academic tools in which I have played a leading role:

NNPDF framework — **Machine Learning, AI, Data Analysis and Visualization, PDF fitting, High Energy Physics**
Released: 2021, github.com/NNPDF/nnpdf — *Eur.Phys.J.C 81 (2021) 10, 958*

Framework for fitting Parton Distribution Functions (PDF) using experimental data and theoretical inputs. All data and theory predictions used during the fits are also public for reproducibility. It also includes a complete data analysis and visualization suite. I am currently the main maintainer and code coordinator of the NNPDF collaboration.

MadFlow **Monte Carlo simulations, GPU computing**

Released: 2021, github.com/N3PDF/madflow *doi:10.5281/zenodo.4954375*

Framework for Monte Carlo simulation of particle physics processes designed to take full advantage of hardware accelerators. Processes can be generated using MadGraph5_aMCNLO and are then output in vectorized (or tensorized) form by the madflow-provided plugin.

PDFFlow **Proton physics, GPU computing**

Released: 2020, github.com/N3PDF/pdfflow *doi:10.1016/j.cpc.2021.107995*

Parton distribution function interpolation library written in Python and based on the TensorFlow framework. It is developed with a focus on speed and efficiency, enabling researchers to perform very expensive calculation as quick and easy as possible.

VegasFlow **Numerical calculations, GPU computing**

Released: 2020, github.com/N3PDF/vegasflow *doi:10.1016/j.cpc.2020.107376*

Monte Carlo integration library written in Python and based on the TensorFlow framework. It is developed with a focus on speed and efficiency, enabling researchers to perform very expensive calculation as quick and easy as possible.

pyHepGrid **Python, grid computing**

Released: 2016, github.com/scarlehoff/pyHepGrid *doi:10.5281/zenodo.3233861*

Core developer of the pyHepGrid tool for distributed computing. Used to run in a systematic and coherent manner resource-hungry programs typically used for HEP simulations. The development of pyHepGrid was done with the focus on NNLOJET but has since being extended successfully to also run other programs such as MCFM, Sherpa or HEJ.

Relevant computer skills

Programming Languages: Fortran, Python, C, C++, js, OpenCL, Cuda

Operating System: Linux, MacOS, Windows

Scripting/Macro Languages: Bash, Latex, gnuplot

Computing Tools: Maple, Mathematica, Matlab, Grid Computing

ML Libraries: Keras, Tensorflow, PyTorch, pandas, scipy

Technologies: Quantum Computing, multiprocessing, GPU programming

Quantum computing Libraries: Qibo, Qiskit

HEP Tools: Madgraph, root, Pythia

Other Projects

pybliotecario **Python, messaging bot**

github.com/scarlehoff/pybliotecario *Currently*

Bot in python that use different remote APIs such as Facebook Messenger API or Telegram to open a communication channel between the social messaging system of choice and the server.

Open Source **Open source contributor**

github.com/scarlehoff *Currently*

I often contribute in different open source projects and am currently the maintainer of several packages in conda-forge and the Arch User Repository

Management Experience

Management & Mentoring
Code Coordinator of the NNPDF collaboration *2024-currently*

Seminar organizer **CERN**
Organizer of the weekly QCD seminar *2023-currently*

Seminar organizer **Milan (Italy)**
Organizer of the joint Milan-Bicocca & Milan weekly seminars *2022*

HiggsTools Final Meeting **Durham (UK)**
Member of the organising Committee *September 2017*

Annual YTF (Young Theorist Forum) 8, 9, 10 **Durham (UK)**
Member of the organising Committee *2016-2018*

ICHEP 2014 **Valencia (Spain)**
Outreach activities *July 2014*

Participation in grants

Automate Monte Carlo simulation on hardware accelerators **University of Milan (Italy)**
Linea 2A, 15000€ (4 Co-Authors) *2020-2021*

New hardware for HEP **University of Milan (Italy)**
Linea 2A, 6000€ (3 Co-Authors) *2019-2020*

Awards & Accrediations

2024: Ramon y Cajal Fellowship: Tenure Track position by the Spanish Ministry of Science, Innovation and Universities (approx 250k€)

2023: Abilitiazione scientifica nazionale II fascia: "Lecturer" level recognize by the Italian ministry of education (sector 02/A2)

2022: Professor Lector: "Lecturer" level recognized by the Agency for the Quality of the University system of Catalonia (AQU)

2021: Profesor Ayudante Doctor: "Lecturer" level recognized by the Spanish National Agency for Quality Assessment and Accreditation (ANECA)

2013: Highest Distinction: Bachelor's Thesis: Numerical resolution of a system with coupled differential equations: applied to Quantum Scattering Problems with Internal Degrees of Freedom

2009: Third Prize: "IV Concurso Nacional para promocion de Jovenes Escritores Cientifico-Tecnicos", ACTA-CEDRO, Scientific Writing

2008: First Prize: "I Concurso Narrativa Juvenil de la Comarca de La Vega", Asociación Gran Vega de Sevilla, Creative Writing

Languages

Spanish: Native

English: Fluent *PhD studies carried out in Durham (United Kingdom)*

Italian: Fluent *University level courses taught and students supervised in Italian*

French: Basic knowledge — *High school, currently living in Geneva*

Japanese: Basic knowledge — *A1.2 level certified*

Conference Talks and Invited Seminars

DIS2024 — **Grenoble (France)**
Phenomenological implications of modern PDF determinations — *April 2024*

NNLOJET Collaboration meeting — **Milano (Italy)**
NNLO Grids in NNPDF from NNLOJET — *March 2024*

NNPDF Collaboration meeting — **Amsterdam (The Netherlands)**
